The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16, 17, 20, 22-30, 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deffense and Tirtiaux taken together for reasons of record.

Applicant argues that the references are related to fractionation of crude unprocessed oil and not to the specific fats of the claims. This has been considered but is not persuasive because the claims are directed to fractionating "raw material". No difference is seen between the oil of the references and the oil of the claims. Applicant also argues that there is no suggestion in the references to warm the oils in Deffense and Tirtiaux before cooling them. These arguments have been considered but are not persuasive. If one of ordinary skill in the art desired to selectively fractionate fat crystals, it would have been obvious to melt the fat before crystallizing it in order to have starting oil that is free of unwanted fat crystals in it. The fact that this is not mentioned in the references is not seen to constitute unobviousness. Crude palm oil is generally processed in

very warm climates and melting the raw material may not be necessary in all climates because the ambient temperature is so high. Further heating the oil is contemplated in Tirtiaux at column 2 of page 18. Also if one of ordinary skill in the art wanted to fractionate a hard fat instead of semi-liquid oil, it would not be possible to fractionate the fat without melting the oil as a first step. It is clear that fractionation of hard fat is contemplated in Deffense in Table 2 because three fractions of stearins are shown. The fact that the specific fat of claim 16 is not mentioned is not seen to constitute unobviousness.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory

period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
